Overview

UKRI: Integration of AI/HPC with quantum computing

Last updated 29 November 2026

Donor: UK Research and Innovation (UKRI)

Deadline: 8 December 2026

Open

Purpose and scope

UK Research and Innovation (UKRI) is the issuer.

Funding

UKRI contributes 80% of the project's full economic costs (FEC), unless opportunity-specific terms state otherwise. The Research Organisation provides the remaining FEC share from its own resources; committed external project-partner funding is additional to FEC. The part of the FEC not funded by the grant must be committed before the project starts.

Who can apply

The Research Organisation must consult professionally qualified procurement staff before procurement begins for contracts over £25,000 excluding VAT, and obtain their approval before placing the order or contract if necessary. New equipment purchased over £115,000 excluding VAT (£138,000 including VAT) must be registered on the Equipment data national database.

Priorities

Project partners are generally expected to contribute to delivery rather than seek UKRI funding.
