Overview

GFO-26-502 – Integrated Point-Source Carbon Capture and Advanced Combustion at Industrial Facilities

Last updated 29 November 2026

Donor: California Energy Commission

Deadline: 19 January 2027

Open

Purpose and scope

The California Energy Commission’s Gas Research and Development Program offers this Grant Funding Opportunity to demonstrate integrated point-source carbon capture and advanced combustion at California industrial facilities, addressing greenhouse-gas and criteria-pollutant emissions.

Priorities

Required activities are to install point-source carbon-capture equipment at California industrial facilities and retrofit advanced-combustion systems to increase flue-gas CO2 concentration, reduce fuel consumption and lower NOx emissions. Partners must demonstrate that combustion upgrades and carbon capture operate together as one system to address both greenhouse-gas and criteria-pollutant emissions.
